## Kitchen electronics: Heating Sausages

**Heat up your sausages without a stove.**

- Take a sausage and stick at both ends of the sausage one metal fork into the meat.
- The fork is connected to the electronic dimmer with a wire. ( all together this will form a loop).
- Switch on the power
- Slowly increase the light with the dimmer
- You will see that your sausage is becoming hot.

**Please note:**

- Keep the lid closed when heating the sausage.
- The sausage can burst open when heated
